A single payments as a service platform (PaaS) that ensures customers never reveal card details when making payments over Voice, Video, Chat and E-commerce

Secure payments over live telephone calls

Enhanced security and fraud prevention for your customers

Payment card Industry Level 1 Security delivered on all products

Handle payments in any location globally, safe in the knowledge no card data is ever disclosed

Multiple ways to accept payments all driven by interfaces that are simple to use and customisable

Detailed and transparent reports and logs allowing your business to focus on selling more

SECURE PAYMENT SERVICE - All under one roof

Keyphone

A simple service allowing payments to be taken using only a telephone keypad. No forms, no fuss and great for taking immediate payments in or out of the office.

Secure Virtual Terminal

A fully customisable user interface that allows business users to capture detailed transaction information and to visually track every keypress from their customers during the payment process.

Payment links

An easy to use service that captures a payment request and generates a payment link or QR code which can be sent to a customer. This included 3DS2 payment identity security as standard.

Card capture to token

Secure card capture on voice, chat, video and web communication channels.

Platform as a service

All Paytia services are delivered from a multi-tenanted PaaS environment. This incorporates automated billing, a sales engine, a partner engagement engine, customer administration portal and end-user interfaces.
